

## Kiew Consulting

Securely accessing applications and customer data from anywhere; a true mobile workforce!

### Customer Situation

Kiew Consulting is a firm of highly qualified accountants and taxation advisors with over 23 years of experience. Their services range from accountancy, tax planning and compliance, HMRC, investigations and business development advice to name just a few.

Based in London with a wide spread and varied clientele it became apparent that their current support and system were not fit for purpose when it came to remote working.

### Solution

enviz IT were referred on to the Managing Director at Kiew Consulting to discuss their current requirements and what they were looking to achieve.

Kiew Consulting already had Small Business Server 2003 in place, enviz upgraded to Small Business Server 2008 Premium giving Kiew an additional license of Server 2008 to configure and therefore enable remote access. Instead of purchasing two physical servers, VmWare EsXi was implemented as a HyperVisor.

### Virtual applications

Due to many of Kiew's staff spending a considerable amount of time on the road, the applications used by Kiew would need to be made available with live data when users were out of the office. The sensitivity of this data meant that security was paramount. enviz implemented Terminal Services on the secondary server and configured all of Kiew's program as remote applications. To follow this, an SSL certificate was applied and configured to the Terminal Server.

### Solution Overview

**Customer Profile** :: Kiew Consulting is a firm of qualified accountants and taxation advisors with over 23 years of experience.

**Country** :: UK

**Industry** :: Accountancy

**Situation** :: With an increased spread of customers, it became apparent to have more members of Kiew Consulting on the road with up to date access to data.
